

Cushion Tire Forklift Attachment

Cushion Tire Forklift Attachments - Cushion tires are a firm tire with a smooth profile. Its' tread is attached to a steel ring in order to form the tire, and the tire is pressed onto a hub which is affixed to the lift truck. These tires are perfect to use in smooth floor warehouses and are accessible in several rubber or polyurethane compounds.

Consisting of polyurethane, a poly tire is a very solid tire. These types of tires are used as a replacement for cushion tires whenever there is a higher load capacity than could be attained utilizing a cushion tire and those applications which require a lower steering effort. Poly tires available in a variety of hardness ratings to meet different specific application needs. Narrow Aisle models and Orderpicker lift trucks would typically utilize small diameter poly tires for their outrigger load wheels.
