The U.S. forklift division located in Cleveland has a skilled team knowledgeable in Sales, Purchasing, Advertising, Logistical and Technical Support.

Originally the domestic forklift market in Korea was an open import enterprise. Korea Machinery Co. Ltd. begun in 1960, to import fully assembled forklifts as part of a domestic equipment expansion venture. Sales of these goods were primarily targeted to state-run companies, large scale businesses, and the armed forces. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift production plant was successfully completed. Continuous technical training became the new focus for enhancing quality and product development.

Daewoo started the first home-based lift truck business in 1967, and rapidly gained a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's progressive technological enhancements combined with sales success placed them in a situation of considerable growth of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to assist them in the highly competitive North American materials handling industry. This project proved highly profitable for Daewoo and their lift truck sales expanded greatly. In 1984, the company finished construction of a new facility to help in producing high end value-added products for export. In 1993, the corporation had a international sales system and started exporting versions they had established through in-house technology, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into overseas marketplaces.
